

TechBarTools

A USB-based IT support toolkit for enterprise and corporate tech bar environments. Consolidates common Windows device management tasks into a single menu-driven launcher — no installation required, runs directly from a USB drive.

Designed for IT support professionals handling device provisioning, reimaging, user management, and driver tracking in a Windows 10/11 environment.

Requirements

- Windows 10 or Windows 11
 - **Must be run as Administrator**
 - PowerShell (built into Windows; no additional install required)
-

Setup

1. Copy all files to the **root of a USB drive**, preserving the folder structure below.
2. Open `TechBarTools.cmd` in a text editor and set your organization's domain on the following line near the top:

```
set "DOMAIN=YOUR_DOMAIN"
```

3. Edit `Scripts\Custom-Autopilot_HWID_GroupTags.ps1` and replace the placeholder group tag entries with your organization's actual Autopilot group tags:

```
powershell

[void] $listBox.Items.Add('GroupTag-1')
[void] $listBox.Items.Add('GroupTag-2')
[void] $listBox.Items.Add('GroupTag-3')
```

4. Right-click `TechBarTools.cmd` and select **Run as administrator**.
-

Folder Structure

```

D:\
├─ TechBarTools.cmd           ← Main launcher (run this)
├─ README.md
├─ Scripts\
│   ├─ Custom-Autopilot_HWID_GroupTags.ps1
│   ├─ Uninstall-HPAudioControl.ps1
│   ├─ 1-DriverVersion.ps1    ← Before Fresh Start
│   ├─ 2-DriverVersion.ps1    ← After Fresh Start, Before Updates
│   ├─ 3-DriverVersion.ps1    ← After Fresh Start, After Updates
│   └─ 4-DriverVersion.ps1    ← After Autopilot
├─ Completed Driver Checks\    ← Driver version CSV output (auto-
populated)
└─ Completed Imports\         ← Processed Autopilot HWID CSVs (auto-
populated)

```

Menu Options

User Management

Option	Description
[1] Add Local Administrator	Adds a domain user to the local Administrators group
[2] Delete Local Administrator	Removes a domain user from the local Administrators group
[3] Remove Hello PIN (English)	Clears the Windows Hello for Business PIN by taking ownership of and clearing the NGC folder

Device Management

Option	Description
[4] Get Hardware ID	Launches a GUI to select an Autopilot group tag, then captures the device HWID and exports it as a CSV named after the device serial number
[5] Clear Completed CSV Imports	Moves processed HWID CSV files to the Completed Imports\ folder to keep the root of the drive clean

Option	Description
[6] Check Driver Versions	Sub-menu to run driver version snapshots at four stages of the imaging/provisioning process
[7] Return Device to OOB (Preserve Hostname)	Runs Sysprep <code>/oobe /reboot</code> while dynamically writing a minimal <code>unattend.xml</code> to preserve the Autopilot-assigned hostname through the specialize pass

Application Management

Option	Description
[8] Remove Application	Sub-menu for uninstalling known applications via dedicated PS1 scripts

Notes

Autopilot HWID Export

Option [4] uses a modified version of the Autopilot HWID capture script originally authored by **Mahesh Kumar**. It captures the device hardware hash and exports it as a CSV to the root of the USB drive, named after the device serial number (e.g. `ABC1234567.csv`). Once uploaded to Intune/your MDM platform, use option [5] to move the file to `Completed Imports\`.

Driver Version Tracking

Options [1-4] under Check Driver Versions are designed to be run at specific stages of the imaging workflow, producing a comparative record of driver states before and after each phase. Output CSVs are saved to the `Completed Driver Checks\` folder.

Return to OOB (Preserve Hostname)

By default, Sysprep resets the computer name to a random `DESKTOP-XXXXXXX` value. Option [7] captures the current hostname before Sysprep runs and writes a temporary `TechBar-unattend.xml` to the Sysprep folder that pins the name through the specialize pass. The file is cleaned up automatically.

Adding New Menu Items

Both the main menu and the Remove Application sub-menu include inline comments explaining exactly how to add new entries. Search for `TO ADD A NEW MENU ITEM` or `TO ADD A NEW APPLICATION` in `TechBarTools.cmd`.

Contributing

Pull requests welcome. If you add support for new applications or expand the toolkit for your environment, feel free to submit a PR or open an issue.
